

Stainless steel shore connection kit, 3+PE, 32 A/230 V

Product code: 120500600

A safe and carefree power connection is your ticket to a comfortable and smooth onboard experience during your stay. The 230 V grid is the source to run your appliances and charge the batteries. Mastervolt offers you everything you need for a high quality grid connection, with safety, security and performance given the highest priority.

Practical tips

- Based on the maximum load for onboard power consumption, choose either a 16 A or a 32 A connection.
- For high loads choose multiple parallel connections to the grid.
- Choose the appropriate connection: Standard is an earthed two-pole plug or the more familiar blue CEE three-pole plug.

You need

- Cable between the grid and application: Industrial, electric triple-core cable with European colour coding (brown, blue, yellow/green) with a thick synthetic sheath.
- An onboard connection: Perfectly protected easy lock system for grid power plug.
- Required safety measures.
- Shore Fix fuse/earth leakage circuit breaker; basic fuse between AC plug and onboard system (product code 124001000).
- High or low frequent isolation transformer. The safest solution for complete isolation of your network and the grid; prevents corrosion via electrolysis.

Article no. 120500600 is no longer available as a set.

The products of the set can be ordered separately:

- Marinc0 7715CRN - 50A cover with threaded ring
- Marinc0 6364CRNX - 50A female connector
- Marinc0 6373EL-B - 50A Easy Lock stainless steel inlet
- Marinc0 199110PK - 32A/50A watertight connector cap
